On a cool January morning in 2016, Ramesh Mitragotri, chief human resources officer of UltraTech Cement Limited (UTCL)¹, flipped through the company's annual report. Like other leaders in the organization, he was proud to work for India's largest cement company. UTCL, with a production capacity of 66.3 million tonnes per annum (mtpa) in 2014, had grown exponentially from its initial 8.5 mtpa in 1998. This pace of growth had ensured that the company was recognized worldwide as being among the industry's market leaders. However, there was still significant scope for growth. The global production of cement had increased from 1.39 billion tonnes per annum (btpa) in 1995 to 4.1 btpa in 2014.² Moreover, although UTCL had a presence across India, there were pockets around the country where there was still scope for UTCL to set up local production units, which would decrease the company's overall production and transportation costs and provide better access to local markets.

With this growth in mind, UTCL had acquired Jaypee Cement Corporation Ltd.'s (Jaypee) 4.8 mtpa Gujarat unit for \$511.853 million in 2013.³ It had also recently bought a number of other Jaypee units, including ten of its integrated and grinding units in large states like Madhya Pradesh and Uttar Pradesh.⁴ Growth through mergers and acquisitions was not new to UTCL. This particular deal had been lucrative for UTCL because it had helped the organization grow by 21.2 mtpa and given it a strong presence in a number of strategically important Indian states. However, mergers and acquisitions came with specific challenges. Among these were cultural and people-related challenges, which were known to be formidable barriers to integration. Jaypee's pay structure had seventy-four compensation components and twenty-seven grades, which was significantly different to UTCL's leaner compensation and organizational structure. The challenge was to combine the two organizations and streamline human resources (HR) policies and practices fairly and equitably and help Jaypee employees integrate into UTCL. Keeping these challenges in mind, Mitragotri inducted a colleague, Umesh Hota, from Hindalco (another ABG company), and decided to partner with him for this merger.

¹ UTCL is a group company of a premium global conglomerate, headquartered in Mumbai, India- the Aditya Birla Group (ABG).

² M. Garside, "Cement Production Worldwide from 1995 to 2020," *Statista*, August 30, 2021, <https://www.statista.com/statistics/1087115/global-cement-production-volume/>.

³ All currency amounts are in US\$ unless otherwise specified.

⁴ An integrated unit comprises an all-inclusive facility that produces clinker from limestone, which is further ground with additives to manufacture cement. A grinding unit, as the name suggests, is a facility that only grinds clinker, along with desired additives, to manufacture cement.

ULTRATECH CEMENT LIMITED

UTCL was incorporated as a public limited company on August 24, 2000. At the time of incorporation, it was known as L&T Cement Ltd. and was a 100 per cent subsidiary of Larsen & Toubro Ltd., a multinational Indian conglomerate. Following internal restructuring and a series of mergers and acquisitions between 2003 and 2012, UTCL moved into the world's top ten cement producers (see Exhibit 1).

UTCL Culture

Despite approximately 60 per cent of UTCL shareholders being promoters or investors, the company was run by professionals from within the cement industry, including a chief executive officer and managing directors who were independent of the promoter group.⁵ There was an established set of organizational policies and practices in place on which the management team based its decisions for the company.

JAYPEE GROUP

The Jaypee Group was founded by Jaiprakash Gaur, who, after acquiring a diploma in civil engineering in 1950 from the Indian Institute of Technology–Roorkee, briefly worked for the government of Uttar Pradesh before setting out on his own as a civil engineering contractor in 1958. Over the next few decades, the group forayed into the power, cement, hospitality, and education sectors. In 1986, the group commissioned its first cement plant in District Rewa, Madhya Pradesh, with a capacity of 1 mtpa and formed Jaiprakash Industries Ltd. by amalgamating Jaiprakash Associates Pvt. Ltd. with Jaypee Rewa Cement Ltd. In 2003, Jaiprakash Associates Ltd. was formed from the merger of Jaiprakash Industries and Jaiprakash Cement.

Jaypee group experienced high growth between 2000 and 2006, which could be attributed to a boom in real estate and infrastructure industries. Motivated by this growth, the group decided to bring Formula One racing to India. Strong business logic drove this decision: Jaypee wanted to create a large event in India and expand business around it. The group won the bid to hold the race in India for five years beginning in 2011, and the group also won the rights to construct the Yamuna Expressway. Envisioning high levels of tourism, Jaypee Group planned a 100,000-seat cricket stadium, a tennis complex, and five townships in the cities of New Okhla Industrial Development Authority and Greater Noida. These large-scale projects were likely to increase demand for cement and power, two commodities that the group produced and supplied.⁶

However, soon after, India was affected by the global financial crisis. Consequently, real estate prices nosedived, quickly followed by a dip in demand for cement.

Revenues of Jaypee Power Ventures Ltd. and JP Associates Ltd. had witnesses compounded annual growth rates of 26.92 per cent and 32.08 per cent, respectively, between financial years 1999–2000 and 2014–15. In the same period of fifteen years, debt of Jaypee Power Ventures Ltd. and JP Associates Ltd. had grown forty times and twenty times, respectively. Jaypee's debt, at the group level, as of March 31, 2015, stood at \$11.547 million.

The company planned to repay debts to the tune \$3.292 million through asset sales in 2015.

⁶ Amrit Raj, "Jaypee Group's Rs61,285 Crore Debt Problem," *Mint*, August 3, 2015, <https://www.livemint.com/Companies/zKDILjtKiKrlDrCg9r1hFL/Jaypee-Groups-Rs61285-crore-debt-problem.html>.

Jaypee Culture

By 2015, due to financial woes, Jaypee's market share had dropped, the brand had lost its shine, the financial support for plant maintenance and infrastructure had stopped, and the impact on capacity utilization was significant. Employee morale and engagement levels were low, and staff were not sure if they would be paid. In some instances, salaries for the previous two months had not been paid. Frugality prevailed and the future looked uncertain. Decision making being centralised, there was often a lack of clearly defined roles and organizational structure. Departments worked in silos, with interdepartmental communication at a low point. Employees were proud of their association with the Chairman, and this association acted as a strong motivator. There was a strong sense of connection and loyalty to the Jaypee group. With Jaypee being a construction and engineering company, the plant design and construction were both very good. There were some administrative practices that were very strong and effective. The strength of the organisation was built on loyalty and connection with the community.

THE MERGER

In February 2016, UTCL announced that it was acquiring Jaypee's cement production assets in the largest deal of its kind in the Indian cement sector.⁷

UTCL paid \$2.180 million to buy Jaypee's cement operations, which had a total capacity of 21.2 mtpa spread across the states of Uttar Pradesh, Madhya Pradesh, Himachal Pradesh, Uttarakhand, and Andhra Pradesh (see Exhibits 2 and 3). In addition, UTCL also acquired a 4 mtpa grinding unit that was under construction in the state of Uttar Pradesh. Of the acquired 21.2 mtpa, an 11.4 mtpa capacity was located in Central India, 5 mtpa in coastal Andhra Pradesh, and 4.8 mtpa in Himachal Pradesh. UTCL's shareholders approved the merger, known as the Scheme of Amalgamation, in October 2016.

A UTCL senior leader explained the rationale of the merger:

We had a good presence in some markets in India, such as western Uttar Pradesh, but were not in central and eastern parts of the state. We only had a marginal presence in Himachal Pradesh, Jammu, and Kashmir. In the south, we were present in Telangana but not in coastal Andhra Pradesh. The Jaypee acquisition got us plants in Himachal, giving us access to Himachal Pradesh, Jammu, and Kashmir, and a plant near Varanasi gave us access to eastern Uttar Pradesh as well as to coastal Andhra Pradesh. It is crucial to have cement plants closer to the market as nearly 20–25 per cent of the total cost of cement can be attributed to transportation. It is better to have grinding units near the market because cement is hygroscopic in nature and absorbs water quickly, adversely impacting quality, so we prefer to transport semi-prepared cement from production plants to grinding units that are located closer to the target market. The cement is further ground and packed in these grinding units and delivered fresh to the market. We had acquired a Jaypee plant in Kutch in northern Gujarat in 2014. This acquisition gave us a glimpse into the type and nature of Jaypee plants. The group was a significant participant in the construction industry, and the plants were well constructed in the 1990s.

⁷ Piyush Pandey, "Ultratech Acquires Jaypee Group's Cement Assets for Rs. 16,500 Crore," *The Hindu*, February 28, 2016, <https://www.thehindu.com/business/Industry/ultratech-acquires-jaypee-groups-cement-assets-for-rs-16500-crore/article8292601.ece>.

INTEGRATION OF CULTURE AND PEOPLE

As per the Scheme of Amalgamation, all permanent employees at the acquired plants became employees of UTCL—approximately 6,000 in number.⁸ This included staff working in plants, logistics, sales and marketing offices, and head office.

Phases of Integration

A detailed plan setting out the integration initiatives and tasks was created. The integration process was divided into three phases: pre-closing (day –10 to day –3), closing day (days 0 and 1), and post-closing. The post-closing phase was subdivided into four milestones: week 1, fortnight 1, fortnight 2, and quarter 1.

Culture

The main aim of the integration plan was to create a unified culture across the combined organizations that reflected the values of the group, and one in which employees felt engaged, connected, committed, and empowered. The management team desired a culture that embodied continuous learning and development and this made UTCL transform itself into a learning organization. This culture would emphasize transparent and fair communication and prioritize high standards in safety, quality, and productivity. It would be a performance-driven culture with a strong adherence to set policies and processes.

Initial Communication

Large-scale preparations were made to communicate with former Jaypee employees. UTCL's management team developed a compendium of information for integrating employees to assist in maintaining process uniformity and provide a seamless transition experience. The compendium was like a roadmap, including details of the milestone dates, media communications with stakeholders, training and induction, safety reviews, approvals and compliance requirements, key stakeholders, contact details for the integration support team.

The pre-closing period was used to source employee data from Jaypee: an employee list, payroll data, employee personnel files, retirement fund details, bonuses due, vacation entitlement, etc.

A welcome meeting was organized for all acquired units on day one. The unit head, functional head, HR, and chief experience officers of the company facilitated this meeting. At this meeting, UTCL's managing director welcomed the employees from Jaypee to their new organization:

We believe that employees play a crucial role in making best practices that give the company and the group a strong leadership position. Our progressive HR policies and practices have made us a preferred employer and won industry recognition. Our culture, supported by various systems and processes, builds on and taps into individual capabilities and channels them to achieve our organizational goals. Now, you are part of this organization.

⁸ According to India's *Companies Act, 2013*, the companies that propose to amalgamate must prepare a Scheme of Amalgamation, a document that sets out all the terms and conditions of the proposed amalgamation, which are then finalized by the boards of directors of the two companies; "The Companies Act, 2013," Ministry of Corporate Affairs, Government of India, accessed February 28, 2022, <https://www.mca.gov.in/content/mca/global/en/acts-rules/ebooks/acts.html?act=NTk2MQ==>.

The meeting also included a lighting of the lamp ceremony, a welcome address and prayer, and talks setting out the context of the merger and emphasizing the importance of safety, discipline, and quality. The way forward was also discussed.

Challenges of Integration

On analyzing the employee data and organizational structure, considerable differences between the two organizations came to light.

Being a promoter-run company, Jaypee had a number of family members involved in running the business: owners or an owner's representative at the top level of the organization and no middle management layer. The majority of those at the top of Jaypee's management structure did not join UTCL. Unlike Jaypee, UTCL operated under an established hierarchy with multiple layers of management. As a result of these differences between the two companies, grade equivalence became a challenge.

With Jaypee experiencing difficulties over the previous few years, the company's supply chain partners had begun to find alternative business partners. As a consequence, UTCL had the additional challenge of strengthening the distribution network it had inherited. The quality of the cement produced had to be improved and made consistent across plants and markets for it to be sold under the UTCL brand. Capacity utilization of Jaypee plants had to be increased from around 20 per cent to over 70 per cent as was the norm in UTCL plants. A focus on safety was developed from day one. UTCL wanted to build efficiency, and placed great emphasis on this. Difficult issues, such as transferring the limestone mines to UTCL, were tackled first. This prioritization gave UTCL enough time to understand Jaypee's way of doing things—its culture—and offered an insight into the skills staff had, which helped with employee-related decisions that UTCL had to make.

According to one senior HR manager, "UTCL's role was very challenging." Employees joining the company from Jaypee were concerned about the acquisition and how it would affect them, including whether

- UTCL was only interested in Jaypee's plants and mines and not its employees;
- they would fit well into UTCL and be able to meet their new employer's requirements;
- they would be retained, downsized, or transferred; and
- there would be a voluntary retirement scheme.

However, as along with apprehensions, Jaypee employees had certain expectations, too. These were based on UTCL's reputation and leading position in the industry. Jaypee employees expected that

- salaries would increase sharply;
- all UTCL policies would apply from day one;
- all their problems would vanish; and
- engineering and construction employees (onsite employees) would get significantly higher compensation (the colonies where they stayed would be upgraded and refurbished).

UTCL had to work toward alleviating apprehensions and moderating expectations. Staff from newly acquired Jaypee, were largely looking forward to the integration because UTCL was perceived as a strong brand with a culture of meritocracy.

Job Banding and Compensation Restructuring

Grade equivalence and compensation restructuring emerged as the two biggest challenges. Jaypee's pay structure had seventy-four compensation components. They varied from person to person rather than according to job roles. Some of these components included: basic pay, bonus, business promotion

allowance, education allowance, transportation allowance, rent allowance, city compensatory allowance, retirement fund contributions, and leave travel allowance.

Production and sales incentives were paid in addition to a Jaypee employee's salary. Incentives were determined on a binary scale—achieved or not achieved—and were based on volume. The annual increment was given on the basic salary only.

Employees in the same position at Jaypee were paid differently. UTCL had fewer additional employee salary components than Jaypee, and UTCL staff were paid strictly based on their position, salary band, and performance.

There were considerable differences in grades too. While all of UTCL's plants had similar organizational structures, Jaypee's differed across plants in (see Exhibit 4). Jaypee had twenty-seven grades compared to UTCL's eleven management bands and five staff grades (see Exhibit 5). In addition, reporting structures at plants were vastly different between UTCL and Jaypee. For example, the logistics department reported to finance at Jaypee, but to sales and marketing at UTCL. Designations did not match with grades in Jaypee. People doing the same work did not have the same job title and may have been placed in different grades at Jaypee. The differences in grades, job designations, and reporting structures made the mapping process difficult.

There were multiple payrolls and with different terms and conditions. Jaypee was cash strapped, and had not paid the last two months' salary.

THE WAY FORWARD

UTCL's leadership and HR team had a difficult task ahead: a new organizational structure had to be created at the plant level, grade equivalence had to be completed for Jaypee and UTCL staff, compensation components had to be rationalized, and salaries based on new grades had to be determined. The team knew that the process had to be fair, transparent, and evidence based. Achieving business outcomes and enhancing person and plant performance had to be kept in mind when making HR decisions. UTCL used the concerns that Jaypee employees had to form the basis for the company's integration principles.

Job Security

Job security was linked to UTCL's continued good performance at the unit and company levels. It also depended on staff having the right skill set, right attitude, and abilities to do the job. It was important for UTCL to do everything possible so that each unit remained healthy and performed well. Everyone had to contribute with productivity and discipline.

Job Bands and Grades

Aditya Birla Group had a structured job analysis and evaluation system that was followed by all companies in the group, including UTCL. As well, UTCL would implement the job banding process in all newly acquired units. Allocation of bands would be done according to similarity and comparability of positions and bands with existing UTCL units

Compensation

All new employees would be aligned with UTCL's salary and grade structure, and no one would lose out.

EXHIBIT 1: HISTORY OF ULTRATECH CEMENT (2000–2016)

Year	Landmark Events
2000	UltraTech Cement Limited (UTCL) was incorporated as a public limited company. At the time of incorporation, it was known as L&T Cement Ltd. and was a 100 per cent subsidiary of Larsen & Toubro Ltd. (a large Indian conglomerate).
2003	The company's name was changed from L&T Cement Ltd. to UltraTech Chem Co. Ltd.
2004	- The cement business of Larsen & Toubro Ltd. (including UltraTech Chem Co. Ltd.) was de-merged. - Narmada Cement Company Ltd. became a subsidiary of the company under the Scheme of arrangement for the demerger of cement business of Larsen & Toubro Ltd. - Grasim Industries Ltd. (a group company of another large Indian conglomerate) acquired the company's management control. - On October 14, 2004, the company's name was changed from UltraTech Chem Co. Ltd. to UltraTech Cement Ltd.
2005–06	The company increased the production capacity of cement from 15.5 million tonnes to 17 million tonnes.
2008–09	- The company further increased the production capacity of cement from 18.2 million tonnes to 21.9 million tonnes as a result of the expansion of capacity at the company's unit at Andhra Pradesh Cement Works (APCW), along with a new split grinding unit at Ginigera Karnataka. UTCL commenced commercial production of cement from their unit in APCW and grinding unit at Ginigera. - The company commissioned 192 megawatt captive TPPs (Thermal Power Plants) at their units at APCW Hirni Cement Works (HCW) in Chhattisgarh and Gujarat Cement Works (GCW) Gujarat in a phased manner. They set up new Ready Mix Concrete (RMC) plants and increased the RMC capacity to 4.76 million cubic meters per annum.
2009–10	- The company increased the production capacity from 21.9 million tonnes to 23.1 million tonnes. UTCL also incorporated a wholly-owned subsidiary company in the United Arab Emirates with the name UltraTech Cement Middle East Investments Ltd. - The cement business of another group company Grasim Industries Ltd. was de-merged and vested in Samruddhi Cement Ltd. - Samruddhi Cement Ltd. was amalgamated with UTCL.
2010–11	The company's wholly-owned subsidiary UltraTech Cement Middle East Investments Ltd. completed the acquisition of ETA Star Cement (ETA) and acquired management control of ETA's operations in the UAE Bahrain, and Bangladesh. The company's capacity stood augmented to 52 million metric tonnes per annum, placing it among the top ten cement companies in the world.
2012	UTCL signed an agreement with the shareholders of Gotan Lime Stone Khanij Udyog Private Limited (GKUPL) Rajasthan to acquire 100 per cent equity shares of GKUPL. With this acquisition, GKUPL became a wholly-owned subsidiary of the company.
2013	The cement unit of Jaypee Cement Corporation Limited, located in Gujarat, was acquired.
